

Xenetech Project #211

Mass Producing Xenetech logos. ["batch" importing graphics to XLGs]

Oops! This file has been lost. Hopefully I'll rebuild it again in the near future. As a summary of what it will say:

1. There is an undocumented feature that will allow you to import scores of graphic files at a time into XLG format.
2. A freeware program called CATALOGr that will help in this process and also use an undocumented feature of XLG to create an alphabetized catalog of all your XLG files.
